

the VTB has successfully achieved the first evolutionary goal, that is, a combination of calculation precision and applicability to all models such as to allow the project itself to evolve to its next level, as planned at its birth.

The invitation to register for "Phase 2 VTB" is now addressed to all Electric RC pilots in the world, both Off and On Road, both 2 and 4 pole, and who wish to be part of the VTB project as the standard bearer of their village:

All interested parties can therefore register for free until 30 September 2024, and only those who have obtained a sufficient "experience score" from suitable VTB cards produced by the end of the year (the score is visible under their name in the internal Personal Area , graphically represented by the symbol of a charging battery), will be rewarded with the indefinite usability (and totally free of charge) of the VTB services, including the Beta Test functions on a par with the Factory Pilots, all starting from January 1st 2025 ; consequently, from that date, trial access to the VTB for the new user will be definitively removed.

We thank all the Pilots who made it possible to achieve this important first objective, certain that they will give their contribution of great value and depth for a long time to come.

[Gian Marco Naldini - Team Manager "VTB Project "]
